

Evaluación Técnica

Frontend Developer (Jr - SSr)

Para la realización de las consignas, tener en cuenta:

- Una vez finalizada la evaluación, publicar el contenido en Github, Gitlab o el repositorio en la nube de preferencia con las instrucciones para clonar, instalar y correr en un ambiente local.

Examen:

Implementar las pantallas adjuntas en el email, 100% responsive:

- Desktop.png
- Mobile.png

Objetivos:

La finalidad de la página es brindarle al usuario una landing específica de vuelos para su destino con los mejores precios.

El usuario debe poder interactuar con el logo, las cajas de “Viajá por XXX días”, las Cards de Ofertas y las cajas con links a otras landings.

Es excluyente utilizar React y Styled Components para su implementación. Para la fuente la fuente predeterminada será Roboto.

Funcionamiento general:

- Al hacer click en las cajas “Todas las estadías” o “Viaja por XXX días” se deberán cargar distintas Cards de Ofertas (las que poseen imagen) dependiendo de la selección del usuario.
- Al hacer click en las cards de ofertas se deberá acceder al link predefinido en otra pestaña del navegador

Obtención de datos:

- El formato de los datos deberá ser JSON. Para simular la interacción con un server de backend recomendamos el uso del servicio <http://myjson.com/>
- Habrá 2 endpoints:

1. Estadías (para las cajas de Viajá por XXX días)

```
{
  "id": "0",
  "name": "Todas las estadías",
  "bestPrice": "26119"
},{
  "id": "1",
  "name": "Viajá por 7 días",
  "bestPrice": "26119"
},
{
```

```

    "id": "2",
    "name": "Viaj   por 10 d  as",
    "bestPrice": "32413"
  }, {
    "id": "3",
    "name": "Viaj   por 15 d  as",
    "bestPrice": "40000"
  }, {
    "id": "4",
    "name": "Viaj   por 19 d  as",
    "bestPrice": "50000"
  }
]

```

2. Contenido para las Cards

```
